

Bioteq Manhole Biofilter

to eliminate odors from sewer manholes

KSBF series (for round manhole)

SBF series (for square manhole)

Cross-Sectional View

➔ **Odorous air from the sewage system enters the biofilter through its perforated bottom.**

The low pressure drop of the filter material allows the air to gradually rise through the filter, where microorganisms degrade the odorous substances. The cleaned air is then released through the vent outlets into the atmosphere.

➔ **Water run off from the street, which enters the manhole, flows through the drain pipe into the sewage system.**
